## Wikipedia logo meaning

Wikipedia project page Don't confuse with Wikimedia logos. Not to be confused with the use of the logo on Wikipedia. This page in a nutshell: Wikipedia had a number of logos before the current puzzle ball was created. ShortcutsWP:WPLOGOWP:WPLOGOS The current Wikipedia logo, v2, was unveiled in May 2010 Wikipedia had a number of logos in its history before coming to the current puzzle logo. The first official logo Wikipedia's first real logo was an image that was originally submitted by Bjørn Smestad [1] for the Nupedia logo contest, which took place in 2000. [2] Jimmy Wales (Jimbo) thought it would be a much better logo than the flag,[quote needed] and it remained for the next eight months, until the end of 2001. It continued to be used after this time on special sites such as search results. The logo contained a quote from the forewor of Eucldyo and his modern rivals Lewis Carroll: Given the effect of fisheye, only part of the text can be read: In one respect this book is an experiment, and may have a chance to prove failure: I mean, I didn't think it was necessary to maintain throughout the seriousness of the style that scientific writers usually affect, and which has somehow come to be considered an 'inseparable accident' of scientific teaching. I have never seen the rationality of this immemorial: the themes are undoubtedly too serious to admit any lightness of treatment – but I cannot accept geometry as one of them. However, I believe it seems to me that I have allowed myself to look into the comic side of things only in convenient seasons, when a weary reader may also long for a moment of breathing-space, and not at every opportunity when it might compromise the continuity of the line of argument. Second logo Wikipedia's second logo In November 2001, Wikipedia began designing new logos. In the first Wikipedia logo contest, held from November to December 2001, a short list of the 24 leading candidates was selected. The winner was the last logo (#24), contributed by The Cunctator. The logo contained the following quote, taken from Thomas Hobbes's Leviathan, Part I, Chapter VI: The Desire to Know Why and How Curiosity; as there is no living creature, but man: so that man is distinguished, not only by his reason, but also by this unique passion from other animals; in which appetite, and other pleasures of reason, preponderance, take away care of know the causes; which is the lust of the mind that by persevering with the joy of a constant and tireless generation of knowledge exceeds the short vehemence of any bodily pleasure. International adaptation Thanks to its English text, this logo was not ideal for Wikipedia in other languages. Some wikis have chosen a similar design with text in their own languages (e.g. Dutch Wikipedia, which used text from the classic book Max Havelaar). Others used the English logo but added color (most Nordic projects, such as Danish) or simply a translation of the Free Encyclopedia (e.g. German). Others have designed a completely different logo (e.g. French Wikipedia). The third logo (puzzle ball) international competition Paul Stansifer is a competition-winning puzzle ball logo After the design by Erik Möller, an international logo contest was conducted to find a new logo that was suitable for all languages. After a two-stage vote, paul stansifer's proposal (then known as PaulIusmagnus) won with considerable support. On September 26, 2003, english Wikipedia switched to it. Stansifer's logo depicted a globe made up of puzzle pieces, more colors. The logo, which is covered with text with links, was a symbol of continuous construction and development of the project. The logo was made in POV-Ray, using a puzzle image wrapped around the sphere. The POV file is available here. Variants of David Friedland's silver ball logo. Typeball of ibm selectric electric typewriter. Soon after, a ratification vote was held to confirm the community consensus. As a result, twelve direct design modifications were made by members of the community. Soon, one of david friedland's modifications (Nohata), sometimes referred to as a silver ball, was selected. A review of Stansifer's draft removed the color and changed the overlaid text to a single letter or symbol to a piece of the puzzle. Both Friedland and Stansifer have assigned copyright to the Wikimedia Foundation logo. While symbolizing the globe's new logo also loosely resembled the typeball as used in some electric typewriter, the former metaphor for liberating the process of professional writing. Finalized logo Main article: Wikipedia logo The third wikipedia logo, with the caption in Hoefler Text Small Caps. There was some controversy about switching English Wikipedia to this logo for several reasons, one of which was the fact Wikipedia servers were flickering for most of the process. Before being released to all Wikipedias, the logo was slightly llighted. After john seigenthaler, Sr. Wikipedia biography controversy, a column in The Times [3] hinted at the logo as a metaphor for the whole project. Rosemary Righter wrote: Just above omega, in a place where on human heads they use to perform a frontal lobotomy, pieces of the puzzle are missing. Alphabets represented in the Symbols logo in the Wikipedia logo, without background. The puzzle logo contains 16 letters from 16 different alphabets, many of which - but not all - represent the letter from this alphabet that most closely resembles an English W, as in Wikipedia. The alphabets represented are as follows: Armenian ini (Ի) N/A N/A N/A Khmer lô (𑜀) N/A Japanese Katakana wa + i (ワヱ)4 Klingon r (ꠞꠞ)5 Tibetan wa + i (ཨ) Greek omega or omega+tonos (Ω or Ω) Latin W (W) Arabic yeh(ﻩ) Devanagari va + i (व)6 Chinese radical 145 (衤/衤 )+5 more in 且(衤) Cyrillic I or Short I(И or Ъ)7 Korean Hangul wi(위) Mongolian Todo I (rotated 90 degrees) (ᠠᠶ) Kannada va + i(ವ)8 Hebrew resh(ר) Thai cho ching(ฉ) There have, over the years, there have been suggestions that some of these characters should be changed to reflect the actual spelling of Wikipedia in different languages. [9] In May 2010 redesign the current logo with a new font, Linux Libertine. In late 2009, the Wikimedia Foundation pledged to correct some of the errors that were recorded in the design of the puzzle of the globe. In particular, it did not spread well, and some letters seemed distorted. [10] For the new Wikimedia Foundation logo, it defined which characters appear on hidden pieces of the puzzle and created a three-dimensional computer model of the globe that allows additional views to be generated. The new logo was unveiled in May 2010. It is commonly referred to as v2 or 2.0 because it represents the second (official) version of the globe puzzle logo to be adopted. It features a new 3D rendering puzzle globe, with corrected characters (and a Klingon character replaced Ge'ez character). The word mark has been modified from Hoefler Text to open-source Linux Libertine font, and subtitles are no longer italic. The Wikimedia blog has more information about the unveiling and WMF Wiki has more detailed information about the new logo. Logo characters v2 N/A N/A N/A N/A N/A N/A Armenian vev(Վ) N/A N/A N/A N/A N/A Tel va + i(వ) Khmer vo + i(វ) N/Akana u + small i(ဝ-၂) Gə'əz wa(ወ ) N/A N/A Swedish wa + i(□) Gujarati va + i(વ) Gothic vinja(γ) Latin E-acute(É) Bengali short u(উ) Greek omega(Ω) Latin W(W) Arabic W(و) Gurmukhī vava + sihari(ਵੈ) Cyrillic ya(Я) Syrian wāw(و) Lontara w + i(ꦮ) Oriya U(ଉ) Burmese script v + i(ဝ) Devanagari va + i(वमम) Traditional Chinese (〃) Cyrillic i(И) Hangul/Choson wi(위) Tāna vaavu + i(ꠞ) Laoian w + i(ວ) Cyrillic ve(B) Hlaholská science(\*) Malayalam va + short i(വ) Inuktitut short u(ᐅ) Georgian vin(ი) Kannada va + i(ವ) Hebrew vav(ו) Thai wo waen + sara i (ว) Latin h(H) Cyrillic u(У) Tagalog Baybayin wi(ꦶꦶ) Latin U(U) Mongolian wa(ᠠᠶ) Limbu wa + i (ꠠꠠ) Cherokee wi (Ꭾ) Tibetan wa + i(ཨ) Tamil va + i(வ) Sinhala va + i(ව) Latin a-umlaut(Ä) Chinese character (鼎) Tai Nua wa(t) Latin V(V) Cyrillic de(Д) Greek pi(Π) Arabic yāʾ(ي) 10th anniversary logo Tenth anniversary logo, which replaced the ball puzzle logo via Wikipedia on January 15, 2011. On January 15, 2011, the standard globe replaced a special logo to commemorate the 10th anniversary of wikipedia's founding. The logo shows one piece of the puzzle, which represents the addition of another piece to the puzzle. 3D version of Play media 3D Wikipedia puzzle ball rotating along its ape (GIF version) The first two versions of the logo were made to resemble the globe using the fisheye effect. The third version (logo puzzle balls) was made in ray tracing program that generates 2D images from the description of the 3D scene. The original 3D scene consisted of a sphere on which an image of the puzzle was projected, as described here. Foot's version introduced a bump map to the lineup that provides 3D relief and simulates separate pieces of the puzzle. A truly tridimensional model has been created, with each piece of jigsaw carved independently to make alternative plasters. It is available on GitHub in animated version and 3D printable version. See also thread What is on the back of the logo? in the foundation mailing list. The physical version of the specific version of the logo is reduced to Lake Sevan in Armenia to create an artificial reef Wikipedia jack-o-lantern Puzzle ball distributed by wikimania 2007 participants of the 3D printed globe very large puzzle globe, nicknamed Wikiball, featured in Wikimania 2007, depicting the approximation of the Wikipedia logo. A smaller version was distributed to the participants. The big ball was dismantled after the closing ceremony, and many participants kept a piece or more of the jigsaw puzzle. The Wikipedia logo was also carved into a jack-o-lantern. In 2017, a concrete version of the logo was submerged in Lake Sevan to create an artificial reef.
